MEMORANDUM FOR: The President

SUBJECT: Senior Review Panel Review of Estimates

The Intelligence Community has a Senior Review Panel composed of former Ambassador to Yugoslavia William Leonhart, retired General William McCaffrey, former Assistant Secretary of State for Economic Affairs Willis Armstrong, and Herbert Rothenberg, a distinguished scientist.

I'd like to share with you its recently completed evaluation of 46 intelligence estimates produced during the first six months of 1982 and those of 1983. They found that 1982-83 estimative production was of extremely high quality in forecast validity and policymaker utility.

They further stated that 1982 and 1983 production would--in their experience--have met most policymaker needs in timeliness, policy issue relevance, analytical quality, readability, and estimative judgment. Overall, as policymaking support, the Panel said it would regard two-thirds to three-quarters of the papers as "superior to outstanding," with the percentage rising as one moves from 1982 to 1983.

They cited one failed estimate, one produced in June of 1982 which predicted Iran's victory over Iraq.

During the years 1981-84, we will have completed 274 National Intelligence Estimates compared with 124 during the years 1977-80. I attach a tabulation indicating the areas in which the increases have been most marked--Soviet political and military, Latin America, Middle East, East Asia, nuclear proliferation, global resources, narcotics, and B/C warfare.

In case you want to glance through subjects addressed in estimates over this period, I also attach a list of National Estimate titles.

  
William J. Casey

Chuck:

I think each Member of the two  
Intelligence Committees should get this  
information.

You determine whether it should be  
mailed or how it should be handled so  
that it will get to each of them  
individually as they wind up this session.
